

Groups Webservice Delete Member

Delete a member

Resource

- **DELETE** | **(root)**/group/{group_id}/member/{member_id}
- **DELETE** | **(root)**/group/{group_id}/member/{member_id},{member_id},..

The **group_id** can be a group name (cn) or a regid.

A set of members can be specified with a comma-separated list.

Specifying no members will delete all members. See [Groups Webservice Delete Members](#)

GWS tries to guess the type of identifier you enter. You may express the type specifically using a type preface.

- **u**: UW NetID
- **e**: ePPN
- **g**: group id
- **d**: DNS name
- **w**: UWWI computers

For example, **u:spud_123** is a UW NetID, wheres **g:spud_123** is a group id.

Return

200	Member(s) deleted
401	Not authorized
404	Group not found

Notes

- Delete member does not use an If-Match header.

Conventions

{text} : replace {text} with specific content

(root): Webservice URL base

(type) : uwnetid | group | dns | eppn
