

Identity Registration Service

UW-IT's Identity Registration service collects, stores, and manages identity profiles so that UW faculty, staff, students, applicants, researchers, and members of affiliated organizations can establish a single identity at the UW, manage their personal settings, and obtain login credentials, such as UW NetIDs.

Service Options

- [Manage your personal identity profile](#): Establish and update your preferred name and directory publishing preferences.
- [Sponsor identity registration for an individual](#): Employees can sponsor individuals that are not a member of a registered population.
- Request identity registration for a new source population: Organizations that establish a relationship with the UW can request an integration with the Identity Registry in order to programmatically manage identity data for their members.
- [Request access to the Identity Registration Web Service](#): Applications can use a REST API to programmatically register individuals and query for updated records upon change notification.
- [Subscribe to notifications for identity updates](#): Applications can receive notifications via Amazon Simple Notification Service when identity records change.
- Request an identity data export: Application owners can request file exports from the Identity Registry to maintain current identity data about their users.
