

UW NetID authentication should be verified using SAML 2 protocol and the UW’s Identity Provider

ID: *EAA-010*

Title: UW NetID authentication should be verified using SAML-2 protocol and the UW’s Identity Provider.

Type

Standard

Description

The preferred protocol and service for authentication is SAML-2 and the UW IdP. For Windows-based systems that cannot easily do SAML-2 authentication, Windows Authentication and the [UWWI Active Directory](#) is acceptable.

Refer to the [IAM Web Authentication Brick](#) to understand lifecycle and trends in preferences for Web Authentication technologies and protocols at the UW, along with accompanying support levels.

Rationale

Implications
