

Groups Webservice Get Effective Member

Get an effective member

Resource

- **GET** | `(root)/group/{group_id}/effective_member/{member_id}`

The `group_id` can be a group name (cn) or a regid.

Return

200	If the id is an effective member of the group. Content includes only a link back to the group.
304	If-None-Match header matches group's ETag
404	Member or group not found

Notes

- An `effective_member` is a gathered resource and cannot be PUT nor DELETED.

Conventions

`{text}` : replace {text} with specific content

`(root)` : Webservice URL base

`(type)` : uwnetid | group | dns | eppn
